

Fathallah Haj

DevOps Engineer | Kubernetes, Terraform, GitOps, Observability, CI/CD, AI Infrastructure Tooling

fatoh.haj@gmail.com | fhaj.dev | [LinkedIn](#) | [GitHub](#) | Israel time zone

PROFESSIONAL SUMMARY

DevOps Engineer with 5+ years of experience building and operating Kubernetes platforms, Terraform/Ansible automation, GitOps delivery, CI/CD workflows, and observability systems across production operations. Current focus: reliable platform engineering and AI-assisted infrastructure tools that keep operational answers tied to real system evidence.

CORE PLATFORM STRENGTHS

- Kubernetes platform workflows, GitOps delivery, and infrastructure-as-code operating models.
- CI/CD automation, developer environment reliability, package/install paths, and release workflows.
- Observability and incident response across metrics, logs, dashboards, alerts, and runbooks.
- AI-assisted infrastructure tooling that retrieves system evidence before composing operational answers.

EXPERIENCE

DevOps Engineer - KLA

2023-Present

- Built a multi-node Kubernetes platform on VMware vSphere, including networking, storage, and scaling.
- Built and operated containerized workloads with Docker and Kubernetes for Linux and Windows containers and VMs.
- Automated infrastructure provisioning using Terraform and configuration management with Ansible.
- Worked with Docker-based containerization workflows including image building, deployment, and runtime management.
- Worked with Git and GitHub workflows including branching, review, and version-control practices.
- Supported Kubernetes networking, load balancing, service communication, and platform troubleshooting.
- Investigated and resolved production issues to improve system reliability.
- Applied basic security practices across infrastructure and CI/CD pipelines.
- Migrated development environments from Windows to Linux.
- Developed a Python-based installer to automate Ubuntu environment setup.
- Built and maintained Debian/Ubuntu packages for internal distribution.
- Implemented Jenkins CI/CD pipelines for build, test, and deployment automation.
- Used AI tools and APIs to assist with automation, scripting, and infrastructure tooling workflows.

DevOps Engineer - Dynamic Yield

2021-2023

- Managed and scaled AWS infrastructure supporting production workloads across Linux environments.
- Deployed and maintained Kubernetes clusters using Helm.
- Implemented GitOps workflows using ArgoCD.
- Built Jenkins and GitHub Actions CI/CD pipelines for application and infrastructure delivery.
- Operated Prometheus, Grafana, and ELK observability for production systems.
- Automated operational workflows using Bash, Python, Go, Terraform, and CloudFormation.
- Supported incident investigation, deployment review, and production reliability workflows.

NOC Tech Lead - Dynamic Yield

2018-2021

- Developed internal monitoring and automation tools to improve system visibility.
- Improved incident response through enhanced monitoring and automation.
- Monitored production systems using Graphite, Nagios, and ELK.
- Authored operational playbooks and supported team onboarding.

SELECTED ENGINEERING WORK

Argus AI - AI DevOps assistant

- Built a NestJS/TypeScript assistant that connects natural-language infrastructure questions to Kubernetes, Prometheus, Loki, ArgoCD, and GitHub Actions context.
- Designed read-only connector architecture with validation, rate limits, provider fallback, and safe logging boundaries.
- Built local Docker Compose observability stack with Redis, Prometheus, Loki, Promtail, Grafana, and the AI service.
- Structured responses around retrieved operational evidence instead of unsupported AI answers.
- Kept v1 scoped to safe diagnostics and operator assistance, avoiding write actions against production systems.

Argus Infra - GitOps Kubernetes platform

- Built a platform repo using Terraform/OpenTofu, Ansible, Kubernetes, ArgoCD, Helm, External Secrets, cert-manager, Prometheus, Grafana, and Loki.
- Separated infrastructure provisioning, host configuration, and GitOps delivery into clear operating layers.
- Added local-cluster, health, sanity, runbook, and CI workflows for repeatable platform verification.
- Documented promotion, rollback, secret-management, and platform troubleshooting paths as operating runbooks.
- Designed the repo as a reusable reference platform for future AI DevOps and monitoring projects.

Argus Monitor - Reliability product system

- Built a microservice monitoring architecture with React, NestJS, PostgreSQL, Redis/BullMQ, WebSockets, alert rules, and Telegram notifications.
- Implemented validation, secret redaction, rate limiting, health checks, and external API resilience patterns.
- Added unit, integration, and E2E test coverage patterns around auth, wallets, alerts, dashboard, and WebSocket flows.
- Used Docker Compose to run local service dependencies consistently across development and test workflows.
- Modeled production reliability concerns including queues, alert delivery, dashboard updates, and failure handling.

SOLitaire - Competitive Solitaire product

- Built a React Native/Expo product with Supabase, Solana wallet authentication, and Anchor escrow-oriented game flows.
- Implemented deterministic Solitaire game logic, match history, rewards, profile flows, and admin/recovery surfaces.
- Documented production constraints around legal signoff, escrow audit, replay validation, refunds, and settlement recovery.
- Added backend validation paths for score submission, settlement jobs, profile synchronization, and abuse controls.
- Kept the portfolio framing focused on product engineering, mobile delivery, and operational risk management.

SKILLS

Cloud / Platforms	AWS, VMware vSphere, GKE, Hetzner, Linux, Windows
Infrastructure / GitOps	Kubernetes, Terraform, OpenTofu, CloudFormation, Ansible, ArgoCD, Helm, External Secrets
CI/CD	Jenkins, GitHub Actions, Git, release automation, package distribution
Observability / Reliability	Prometheus, Grafana, Loki, ELK, Graphite, Nagios, runbooks, incident response
Languages / AI	Python, Bash, Go, Node.js, PowerShell, TypeScript, LLM APIs, tool calling

EDUCATION AND LANGUAGES

B.Sc. Electrical Engineering and Computer Science - Tel Aviv University

Arabic: Native | Hebrew: Fluent | English: Fluent
