

Fathallah Haj

DevOps Engineer | Kubernetes, Terraform, GitOps, Observability, CI/CD, AI Infrastructure Tooling

fatoh.haj@gmail.com | fhaj.vercel.app | [LinkedIn](#) | [GitHub](#) | Israel time zone

PROFESSIONAL SUMMARY

DevOps Engineer with 5+ years of experience building and operating Kubernetes platforms, Terraform/Ansible automation, GitOps delivery, CI/CD workflows, and observability systems across production operations. Current focus: reliable platform engineering and AI-assisted infrastructure tools that keep operational answers tied to real system evidence.

EXPERIENCE

DevOps Engineer - KLA

2023-Present

- Built a multi-node Kubernetes platform on VMware vSphere with networking, storage, scaling, and Linux/Windows workloads.
- Automated infrastructure with Terraform and Ansible; supported Docker image build, deployment, and runtime workflows.
- Implemented Jenkins CI/CD pipelines and used Git/GitHub branching, review, and version-control workflows.
- Migrated developer environments from Windows to Linux; built a Python Ubuntu installer and Debian/Ubuntu packages.
- Supported Kubernetes networking, load balancing, service communication, production troubleshooting, and reliability.
- Applied infrastructure/CI/CD security practices and used AI tools/APIs for automation and scripting workflows.

DevOps Engineer - Dynamic Yield

2021-2023

- Managed AWS production infrastructure across Linux environments and maintained Kubernetes clusters using Helm.
- Implemented ArgoCD GitOps workflows and Jenkins/GitHub Actions pipelines for application and infrastructure delivery.
- Operated Prometheus, Grafana, and ELK observability while supporting incident investigation and reliability workflows.
- Automated operational workflows using Bash, Python, Go, Terraform, and CloudFormation.

NOC Tech Lead - Dynamic Yield

2018-2021

- Developed internal monitoring and automation tools to improve production visibility and incident response.
- Monitored production systems using Graphite, Nagios, and ELK; authored playbooks and supported team onboarding.

SELECTED ENGINEERING WORK

Argus AI - AI DevOps assistant

- Built a NestJS/TypeScript assistant that connects infrastructure questions to Kubernetes, Prometheus, Loki, ArgoCD, and GitHub Actions context.
- Designed read-only connectors with validation, rate limits, provider fallback, safe logging, and evidence-backed AI responses.
- Built a local Docker Compose observability stack with Redis, Prometheus, Loki, Promtail, Grafana, and the AI service.

Argus Infra - GitOps Kubernetes platform

- Built a GitOps platform repo using Terraform/OpenTofu, Ansible, Kubernetes, ArgoCD, Helm, External Secrets, cert-manager, Prometheus, Grafana, and Loki.
- Separated provisioning, host configuration, GitOps delivery, health checks, sanity tests, CI workflows, and runbooks.

Argus Monitor - Reliability product system

- Built a reliability product system with React, NestJS, PostgreSQL, Redis/BullMQ, WebSockets, alert rules, and Telegram notifications.
- Implemented validation, secret redaction, rate limiting, health checks, external API resilience, and test coverage patterns.

SKILLS

Cloud / Platforms

AWS, VMware vSphere, GKE, Hetzner, Linux, Windows

Infrastructure / GitOps

Kubernetes, Terraform, OpenTofu, CloudFormation, Ansible, ArgoCD, Helm, External Secrets

CI/CD

Jenkins, GitHub Actions, Git, release automation, package distribution

Observability / Reliability

Prometheus, Grafana, Loki, ELK, Graphite, Nagios, runbooks, incident response

Languages / AI

Python, Bash, Go, Node.js, PowerShell, TypeScript, LLM APIs, tool calling

EDUCATION AND LANGUAGES

B.Sc. Electrical Engineering and Computer Science - Tel Aviv University | Arabic: Native | Hebrew: Fluent | English: Fluent
